

ANKIT KUMAR

AI Automation Developer | Full-Stack | RAG & Agent Systems

+91 6397508432 | Moradabad, Uttar Pradesh | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

AI Automation Developer with 6 months of hands-on industry experience building intelligent multi-agent systems, RAG pipelines, and voice-enabled AI applications. Proficient in Python, Flask, React, Docker, Pinecone (vector DB), n8n workflow automation, and Vapi voice agents. Built and deployed a multi-agent AI system featuring a shared vector memory layer enabling real-time context propagation across all agents, with integrated email/calendar automation and RAG-based file ingestion. Seeking roles in AI engineering, automation development, or full-stack development.

TECHNICAL SKILLS

Languages:	Python, JavaScript, Java, C
AI & ML:	RAG Pipelines, LLM Integration, Prompt Engineering, Multi-Agent Systems, Random Forest
Tools & Platforms:	N8N, Vapi, Pinecone (Vector DB), Docker, Flask, Git
Web Technologies:	React.js, HTML5, CSS3, REST APIs
Databases:	MySQL, SQL, Pinecone
Data Science:	Data Preprocessing, Model Training & Validation

WORK EXPERIENCE

Software Developer Associate | **Teknij Technologies** | Noida (Remote) Oct 2025 – Present

- Designed and deployed a production-ready multi-agent AI platform featuring 5 specialized agents with centralized vector memory (Pinecone), enabling context-aware responses across sessions.
- Integrated Vapi voice agents, allowing end users to execute multiple tasks (scheduling, data retrieval, follow-ups) using a single voice command.
- Built RAG pipelines supporting PDF, CSV, and custom file uploads so agents learn from proprietary business data, improving response accuracy significantly.
- Developed backend REST APIs using Flask and Python; integrated n8n for email and calendar workflow automation; containerized the full application using Docker.
- Connected agents to user email and calendar accounts to autonomously schedule meetings and send follow-up messages on behalf of users.

PROJECTS

Multi-Agent AI Platform with Centralized Memory

Tech Stack: Flask, Pinecone, Vapi, n8n, Docker, HTML/CSS/JS

- Architected 5 collaborative AI agents sharing context via a Pinecone vector database, enabling persistent memory and coordinated task execution.
- Integrated hybrid voice + chat interface; implemented file-based knowledge ingestion (PDF/CSV); automated business actions via n8n workflows.
- Containerized and deployed the entire platform using Docker for consistent, reproducible environments.

Diabetes Prediction Web App

Tech Stack: Python, Flask, Machine Learning, HTML/CSS

- Built a full-stack web app using a Random Forest classifier to predict diabetes risk with 85% accuracy.
- Designed a responsive UI for real-time predictions, integrating the ML model directly into the Flask backend.

EDUCATION

Master of Computer Applications (MCA) Graphic Era Hill University, Dehradun CGPA: 7.5 / 10.0	2025
Bachelor of Science – Computer Science (B.Sc. CS) Vardhman College, Bijnor, Uttar Pradesh 56.7%	2023
12th – U.P. Board S.B.D.M. Intermediate College, Rampur Ghoghar, Moradabad 77%	2020

CERTIFICATIONS

- **Object-Oriented Programming with Java** — Coursera, Universidad de Palermo
- **Introduction to HTML5 and CSS3** — Coursera, University of Michigan
- **Model context Protocol: Advanced Topics** — Anthropic Education
