Moradabad, Uttar Pradesh - 244602

◆ Profile Summary

AI Automation Developer with 6 months experience at **TEKNIJ**

TECHNOLOGIES. Skilled in building AI agents, RAG pipelines, voice agents (Vapi), workflow automation (n8n), vector databases (Pinecone), Docker, Flask, Python, JavaScript, and React. Delivered a production-ready multi-agent AI platform for the tea industry.

◆ Technical Skills

Programming Languages: Python, JavaScript, Java, C

AI & Automation: RAG, Pinecone, N8N, Vapi, Prompt Eng.

Web Technologies: HTML, CSS, React.js

Databases: MySQL, SQL, Pinecone (vector DB)

Machine Learning: Data Preprocessing, Model Training, Model Validation

◆ Work Experience

TEKNIJ TECHNOLOGIES (Noida)

Software Developer Associate (Full-time)

Moradabad/Remote

[Oct. 2025] – Present (6 months)

- Developed a production-ready AI platform with 5 specialized AI agents with centralized memory system and the section to upload your documents and train your agents on your data.
- Implemented voice agents using Vapi, enabling users to interact via speech and do multiple tasks with a single voice command.
- Built RAG pipelines allowing users to upload files (PDF, CSV, etc.) to train agents on proprietary data – improving response accuracy significantly.
- Created backend APIs using Flask and Python, integrated n8n for workflow automation (email, calendar actions), and containerized the application using Docker.
- Integrated email and calendar accounts for agents to schedule meetings and send follow-ups on behalf of users.

◆ Education

Master of Computer Applications (MCA) Graphic Era Hill University,
Dehradun Passing Year: 2025 | CGPA: 7.5/10

Bachelor of Science (Computer Science) Vardhman college
Bijnor, Bijnor (U.P.) Passing Year: 2023 | 56.7%

12th from U. P. Board S.B.D.M. Intermediate
College, Passing Year: 2020 | 77% Rampur Ghoghar,
(MORADABAD)

◆ Projects

➤ Multi-Agent AI platform with Centralized memory

Tech Stack: Flask, Pinecone, Vapi, N8N, Docker, HTML/CSS/JS

- Built 5 collaborative AI agents with shared context using vector database.
- Integrated voice + chat interface, file-based knowledge ingestion, and automated actions.
- Deployed using Docker containers.

➤ Diabetes Prediction Web App

Tech Stack: HTML, CSS, Flask, Python, Machine Learning.

- Developed a web app predicting diabetes risk using Random Forest (85% accuracy).
- Designed responsive UI for real-time predictions.

◆ Certifications

- **Object Oriented Programming with Java-** Coursera, Universidad de Palermo
- **Introduction to HTML5 and CSS3-** Coursera, University of Michigan
